Course Code	Course Name	Credits
MEDLO8044	**Energy Management in Utility Systems**	**4**

Objectives:

1. To familiarise principles of energy management and concept of energy management in utility systems
2. To study energy economics and auditing
3. To study electrical energy management, cogeneration and waste heat recovery.

Outcomes: Learner will be able to…

1. Demonstrate general aspects of energy management
2. Summarize and explain need for energy management, economics and auditing
3. Illustrate basics of energy economics and financial analysis techniques
4. Describe importance of thermal and electrical utilitie's maintenance
5. Assess potential and summarise benefits of waste heat recovery and cogeneration
6. Illustrate waste heat recovery and cogeneration methods

Module	Detailed Contents	Hrs.
01	**General Aspects of Energy Management**: Introduction to utility systems (Types) Current energy scenario: India and World, Current energy consumption pattern in global and Indian industry, Principles of Energy management, Energy policy, Energy action planning, Energy security and reliability, Energy and environment, Need of Renewable and energy efficiency, Energy Conservation Act	08
02	**Energy Auditing :** Need of Energy Audit, Types of energy audit, Components of energy audit, Energy audit methodology, Instruments, equipment used in energy audit, Analysis and recommendations of energy audit - examples for different applications, Energy audit reporting, Energy audit software. Material & Energy Balance	08
03	**Energy Economics:** Costing of Utilities - Determination of cost of steam, natural gas, compressed air and electricity. Financial Analysis Techniques - Simple payback, Time value of money, Net Present Value (NPV), Return on Investment (ROI), Internal Rate of Return (IRR), Risk and Sensitivity analysis	09
04	**Energy Efficiency in Thermal Utilities:** Energy performance assessment and efficiency improvement of Boilers, Furnaces, Heat exchangers, Fans and blowers, pumps, Compressors and HVAC systems. Assessment of steam distribution losses, Steam leakages, Steam trapping, Condensate and flash steam recovery system	08
05	**Electrical Energy Management and Lighting:** Distribution and transformer losses. Electrical motors - types, efficiency and selection. Speed control, Energy efficient motors. Electricity Act 2003. **Lighting** - Lamp types and their features, recommended illumination levels, lighting system energy efficiency.	07
06	**Cogeneration and Waste Heat Recovery**, Cogeneration- Need, applications, advantages, classification, the cogeneration design process. Waste heat recovery- Classification and application, Potential for waste-heat recovery in Industry, Commercial WHR devices, saving potential. CDM projects and carbon credit calculations	08

Assessment:

Internal Assessment for 20 marks:

Consisting **Two Compulsory Class Tests**

First test based on approximately 40% of contents and second test based on remaining contents (approximately 40% but excluding contents covered in Test I)

End Semester Examination:

Weightage of each module in end semester examination will be proportional to number of respective lecture hours mentioned in the curriculum.

1. Question paper will comprise of total **six questions**, **each carrying 20 marks**
2. **Question 1** will be **compulsory** and should **cover maximum contents of the curriculum**
3. **Remaining questions will be mixed in nature** (for example if Q.2 has part (a) from module 3 then part (b) will be from any module other than module 3)
4. Only **Four questions need to be solved**.
